

NEWS RELEASE

Kim Document and Autaro Forge Alliance to Drive Digital Transformation

London, May 22, 2024: Kim (www.kimdocument.com), the no-code, SaaS, patent-protected document generation, assembly, and workflow automation platform, announces a strategic partnership with Autaro (<https://autaro.ai/>), the cutting-edge provider of managed process automation services.

Kim enables the digitization and automation of the production, assembly and management of crucial business documents and forms to accelerate service delivery, enhance work visibility and enable data-driven decisions.

Autaro's comprehensive digital transformation program for process automation, in alliance with Kim, covers the entire spectrum of design, deployment, management, and monitoring. This strategic partnership ensures businesses can seamlessly leverage automation without the need for extensive internal resources. The collaboration capitalizes on both parties' strengths, combining Kim's innovative document and data automation technology with Autaro's consulting-led expertise in streamlining operations through automation, thereby delivering enhanced value to businesses.

Empowering Businesses with Comprehensive Automation Solutions

As a key component of its preferred technology stack, Autaro leverages Kim's solutions to help customers streamline crucial document processes. By offering these solutions as managed services, Autaro also assists organizations in freeing up people resources to concentrate on key tactical and strategic activities, thereby enhancing operational efficiency.

Samantha Jefferies, VP of Business Development at Kim Document, commented, "We are excited to partner with Autaro, a company that complements our ambition to make document automation universally accessible and beneficial. The combination of their expertise combines the power of AI, process automation, the Microsoft platform, a client's existing applications, and Kim to digitalize and automate document production and data collection and provide auditable structured data. Their combination of discovery, strategy, data analysis, implementation and managed service really helps to accelerate client's digital strategy with a proven methodology."

Matt Newton, Co-founder of Autaro, affirmed, "Our combined expertise, as automation and digitization experts, will empower customers to solve problems and deliver superior services to their clients. Kim, as a key part of any digitization tech stack, and Autaro's comprehensive digital transformation program is the perfect match for businesses operating in every sector in the UK, ensuring a meaningful digital transformation strategy."

Delivering on the Promise of Digital Transformation

The collaboration between Kim Document and Autaro is more than a partnership. It is a shared vision for driving digital transformation across sectors. The comprehensive suite of services offered by this partnership will propel businesses towards:

- **Efficient Automation:** Streamlined document processing and operational workflows, reducing manual effort and minimizing errors.
- **Cost Reduction:** Significant savings through optimized processes and reduced need for manual intervention.

NEWS RELEASE

- **Enhanced Customer Satisfaction:** Faster, more accurate document creation and improved data capture.

About Kim

Kim is a no-code, SaaS, patent-protected document generation, assembly and workflow automation tool. Kim's Enterprise solution is proven with Fortune 500 organizations in legal, compliance, contract management, company secretarial, office productivity and other functions.

Kim's Business tier allows any function or role in small, medium or large organizations to take their existing Word documents and automate them plus turn them into web applications that can be shared internally and/or externally. It automates letters, forms, records, checklists and contracts in minutes, with no training, integrates seamlessly with MS Teams, and is accessible from any browser.

Kim has two patents. When a DOCX template is uploaded into the Kim software it gains additional knowledge by learning the structural composition of each template and it can interface with any authenticated and authorized client over HTTPS with an intelligent understanding of the correctness of the data being supplied. This enables the automatic extraction of tags from the multiple sample documents, the storing of the tags in a data schema separate from the documents, automatically generating structural schemes from the tags, automatically creating document templates from the sample documents and processing the document templates to create unique identifiers (see 'Patent Headlines' section and the Kim patent: <https://patents.justia.com/patent/10817662>).
